JAN. 13, 2022 • 11AM CDT

A streamer's dream.

The Revelator Dynamic USB microphone takes the clarity and warmth of our fan-favorite PD-70 microphone and adds easy-to-use, customizable presets to further polish your voice. Need to add backing tracks, Zoom calls, or gameplay audio? Revelator Dynamic has you covered with a built-in mixer, which makes it simple and fast to blend your voice with audio from other applications and send a professional quality mix to your stream or podcast.

Designed for your voice.

The custom-built microphone capsule in the Revelator Dynamic is built to capture your voice cleanly and clearly while eliminating handling noise and breathiness that can get between you and your audience. Thanks to superior off-axis rejection, you can set up your broadcast or recording studio in just about any space—and unwanted reverberance, electrical hum, and the random car driving by will be left behind, leaving only the pristine, natural sound of your voice.

Sound like a pro, right from the start.

Recording vocals by yourself can be challenging, that's why we include eight professionally-crafted presets to make your voice sound polished right from the start. Like what you hear? Revelator Dynamic gives you the option to record your vocals fully processed, making for less work in post-production. And when you're ready to create your own unique sound, open Universal Control and you'll find all the studio tools you need to create a preset that's just right for you.

Easily mix in loopback audio from other applications.

Revelator Dynamic's simple mixer makes it easy to add backing tracks to your livestream performance or to conference in a Zoom caller to your podcast. With two dedicated stereo channels just for loopback audio on both macOS and Windows, you can mix and record the audio from two different applications along with your voice—all at the same time.

Built-in Headphone Monitoring.

Revelator Dynamic makes it easy to hear your performance loud and clear. The simple, onboard Monitor control lets you blend your voice with playback from your computer; creating a great monitor mix is fast and uncomplicated.

All the tools you need... included.

Revelator Dynamic includes a sturdy, extendable desktop mic stand for perfectly comfortable mic positioning. You also get Studio One Artist production and recording software that makes it easy to polish your recordings with its lightning-fast drag-and-drop workflow and fully-featured production environment. Whether you're recording a complete album or just adding bumpers to your podcasts, Revelator Dynamic and Studio One Artist give you everything you need to get professional results.

The Pitch:

(ie, read on if you like making lots of sales.)

If you only have **30 SECONDS** to sell the customer, tell them...

Set up your streaming or podcasting studio anywhere and still get a great take! The Revelator Dynamic features the same custom microphone capsule used in the PreSonus PD-70 and provides superior off-axis rejection, so unwanted room noise

and reverberation won't be captured and your voice will come through with studio-grade warmth and clarity. Eight professionally-crafted presets make your voice sound polished right from the start. You can even record your vocals fully processed, making for less work in post-production. And when you're ready to create your own unique sound, you'll find all the studio tools built-in to create a preset that's just right for you.

- **USB-C®-compatible microphone for streaming, podcasting, home recording, and more**
- **Same custom-designed microphone capsule as the PreSonus PD-70 broadcast dynamic microphone**
- **Superior off-axis rejection removes unwanted room noise leaving only the warm, natural sound of your voice**
- **8 easy-to-use presets make getting that "radio sound" a breeze... no audio engineering experience required**
- **Built-in headphone amplifier with zero-latency monitoring let you listen in real-time**

When you have **60 SECONDS,** continue by telling them that...

Revelator Dynamic's simple mixer makes it easy to add backing tracks to your livestream performance or to conference in a Zoom caller to your podcast. Two dedicated stereo channels for loopback audio means

you mix and record the audio from two different applications along with your voice—all at the same time. No complex routing or extra hardware required.

- **Two stereo loopback audio channels make it easy to add audio from Skype calls, gameplay, background music and more**

When you have **90 SECONDS OR MORE,** continue with...

Revelator Dynamic makes it easy to hear your performance loud and clear. The simple, onboard Monitor control lets you blend your voice with playback from your computer; creating a great monitor mix is

fast and uncomplicated. The same mixer that makes it easy to add audio from other applications also lets you make a dedicated mix for your Zoom interviews, Discord chat, and more. A complete production kit, Revelator Dynamic also comes with PreSonus' award-winning recording software, Studio One, plus you get the Studio Magic Software Suite, a robust collection of world-class sound libraries, instruments, effects, and tutorials for use with nearly any recording software.

- **Easy monitoring built in**
- **Create multiple mixes: one for you, one for your Zoom caller or your Discord chat, and one for your stream**
- **Studio One Artist included**
- **Studio Magic Software Suite included**

Revelator Dynamic also includes the sturdy, extendable PTS-1 desktop mic stand for perfectly comfortable desktop mic positioning.

Who is the customer for the Revelator Dynamic?

The Revelator Dynamic microphone is the perfect solution for podcasting, gaming, streaming, and simple home studios for vocal production. It's ideally suited for absolute beginners to intermediate content creators who want simplicity, versatility, and professional sound right out of the box—but don't want to fuss about with a separate audio interface.

Does Revelator Dynamic require an audio interface?

Nope. Technically, Revelator Dynamic is a microphone and an interface. You plug it straight into a computer via USB-C.

How does the Revelator Dynamic compare to the PreSonus PD-70?

The Revelator Dynamic and PD-70 share the same microphone capsule. The Revelator Dynamic adds DSP for onboard voice effects and mixing in loopback audio channels... all the same technology every Revelator-series product is known for.

What kind of voice effects processing do you get?

The processing inside Revelator as well as the custom presets on board were created using the exact same processing algorithms as our award-winning StudioLive Series III mixers. Every Revelator-series product offers the full StudioLive Fat Channel with a high-pass filter, 4-band parametric EQ, Compressor, Gate, and Limiter. Each preset has been sculpted by professional audio engineers to deliver broadcast studio quality to the most novice customers. For more advanced users, the StudioLive processing is fully editable from Universal Control. And for those in between, each processor in the Fat Channel offers presets for users to mix and match a custom sound with minimal effort.

Additional voice effects include a doubler, de-tuner, vocoder, ring modulator, filters, and delay that can be inserted onto the audio signal to create crazy effects. Singers will appreciate a dedicated reverb bus to add just the right amount of ambience to their recordings.

How many presets do you get?

Revelator Dynamic stores 4 presets that can be accessed directly from the hardware. An additional 12 presets can be loaded from Universal Control. Presets can be edited and rearranged quickly and easily from Universal Control and then stored on four button positions on the Revelator Dynamic so users can always have their four go-to sounds at their fingertips.

Do the presets print on the recording?

By default, yes. But this preference can be changed in Universal Control so that processing is active for monitoring only.

Can the presets be bypassed completely?

Yes! If you want to record completely dry, simply press and hold the Preset button on the front of Revelator Dynamic to bypass the onboard processing.

What is the Revelator Dynamic's polar pattern?

Revelator Dynamic is a cardioid, end-address microphone.

How does the user access the stereo loopback streams?

On Windows, Revelator Dynamic is set to multi-channel mode so it presents itself as three stereo devices: Revelator Dynamic, Revelator Dynamic Loopback 1, and Revelator Dynamic Loopback 2. The first input is hard-routed from the microphone. Revelator Dynamic Loopback 1 and 2 are 2x2 stereo loopback streams that can be used to record or stream the output for up to two applications at once.

On macOS, the user can choose between Single and Multi modes from Universal Control. By default, Single is enabled and Revelator Dynamic shows up as a 6x6 audio interface. PreSonus recommends switching the Multi mode for the best experience when using loopback.

Is the Revelator Dynamic a mono or a stereo mic?

Revelator Dynamic's mic signal is mono. While there are two input streams available to this source, both streams receive the same signal.

Does Revelator Dynamic feature any mixing capability?

Yes! From Universal Control, the user can create a mix between their mic and their loopback streams in addition to editing the processing for their mic channel. A dedicated reverb bus is also included, plus voice effects. Users can create four separate mixes: one for monitoring, two for Skype and Discord chats, and a dedicated mix just for their stream.

Can you add processing to the loopback streams?

No. Voice effects processing is reserved exclusively for the mic signal.

Does Revelator Dynamic come with any software?

A bunch! Like all PreSonus audio interfaces, Revelator Dynamic customers get Studio One Artist, which includes a Podcast template for creating your first episode—or your 500th and now features full VST/AU support. You also get the Studio Magic Suite, a bundle of over a thousand bucks worth of effects, instruments, and more, including Ableton Live Lite.

Does Revelator Dynamic include a stand?

Yes! Revelator Dynamic includes the sturdy, extendable PTS-1 desktop mic stand for perfectly comfortable desktop mic positioning.
